

PRATHYUSHA BUDDHA

FLUTTER DEVELOPER

+91 6301447679 • Anakapalli, Andhra Pradesh • prathyushabuddha444@gmail.com • [LinkedIn](#) • [GitHub](#)

PROFESSIONAL SUMMARY

Flutter Developer with **4+ years of experience** in cross-platform **mobile development**, building and shipping production apps on **Android and iOS**. Skilled across the full app lifecycle – UI/UX redesign, **REST API/JSON** integration, **Hive** caching, and **ProGuard/R8** optimization – delivering two live apps via a shared **Flutter flavor-architecture**. Expanding into applied AI to integrate **generative AI** into mobile products.

WORK EXPERIENCE

Vyas Cancer Research Park - Software Engineer (Flutter Developer) | Jun 2022 – Present

- **Architected a single multi-flavor Flutter codebase** powering 2 production apps ([Lumiseek](#), [Health & Harmony](#)) on Android and iOS, reducing code duplication and accelerating release cycles.
- **Integrated 15+ RESTful APIs** and implemented **Hive** local caching to auto-save registration drafts, preventing user input loss.
- **Resolved critical FCM push notification issues**, eliminating duplicate alerts and fixing deep-link routing on click.
- **Hardened release builds** using ProGuard/R8 obfuscation and resource shrinking, reducing app size by ~15%.

PROJECTS

Multi-Flavor Enterprise & Wellness Apps (Lumiseek & Health & Harmony) | Flutter, Dart, Firebase, Hive, REST APIs

- Developed a shared, white-label Flutter architecture powering distinct business models from a single codebase: an oncology research collaboration platform (Lumiseek) and a wellness booking ecosystem (Health & Harmony).
- Built modular community & engagement features adapted across both apps, supporting real-time discussion forums, wellness clubs/programs, and live member chat with media sharing.
- Implemented reusable appointment and scheduling workflows with date/time slot validation, dynamic role-based access control (RBAC), and deep-linked FCM notifications.

VIBE – AI-Powered Content Generation App (Personal Project) | Flutter, Dart, BLoC, Python, FastAPI

- Architected a mobile AI app using BLoC to handle asynchronous event streams, UI loading states, and API error handling.
- Connected Flutter app to a Python/FastAPI backend to stream inputs and structured AI responses.
- Formulated prompt engineering workflows to format user requests and return consistent, high-quality AI outputs.

TECHNICAL SKILLS

Mobile Development: Flutter, Dart, Android, iOS, BLoC (State Management)

Backend & APIs: FastAPI, Python, RESTful APIs, Firebase, Postman

Databases & Tools: Hive, Git, Android Studio, ProGuard/R8, Third-Party Library Integration

Emerging Tech: Generative AI, AI Prompt Engineering

EDUCATION

Dadi Institute of Engineering and Technology
B.Tech, Computer Science Engineering – 2022 | CGPA: 7.3

CERTIFICATIONS

- Generative AI Mastermind – Outskill (2026)
- Dart Programming – Udemy (2023)
